Afinia 3D Printing Software on Mac 10.9.5: Installation Failure Resolution

If the Afinia 3D Printing Software fails during installation, one of the Security & Privacy settings may need to be changed.

To make this change, open the System Preferences and click the **Security & Privacy** icon.

Change the **Allow applications downloaded from:** setting to **Anywhere**.

You may need to click the lock in the lower left corner and enter your password to make this change. Be sure to relock the lock after making the setting change.

Restart the Mac and run the installation again.

After installation of the Afinia 3D Printing Software completes, open the **Security & Privacy** settings again and change the application setting back to the original option.
